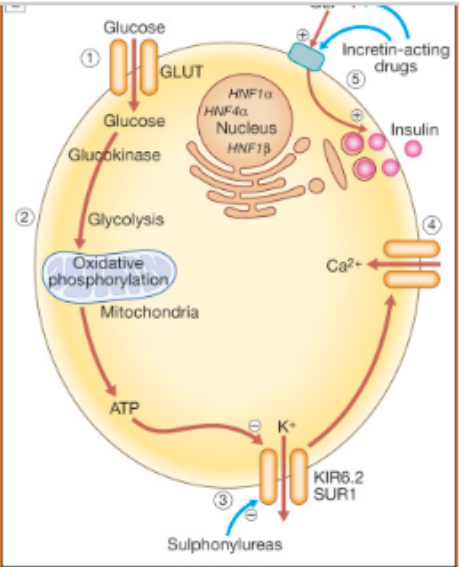

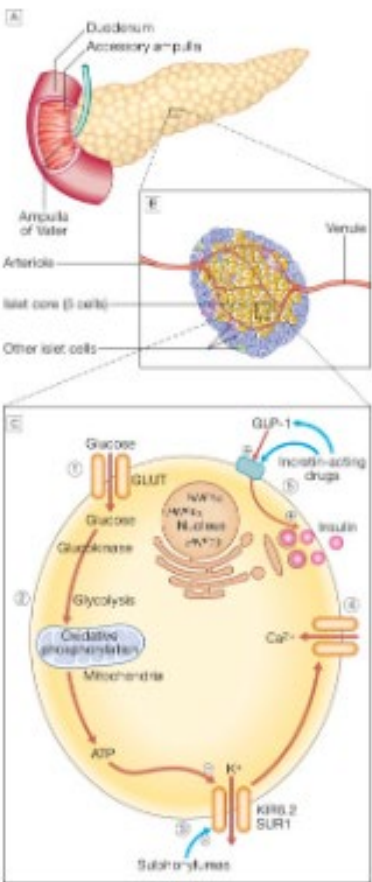

Fig. 20.2

Pancreatic structure and endocrine function.

A The normal adult pancreas contains about 1 million islets, which are scattered throughout the exocrine parenchyma. Histology is shown in [Figure 20.6](#). **B** The core of each islet consists of β cells that produce insulin, and is surrounded by a cortex of endocrine cells that produce other hormones, including glucagon (α cells), somatostatin (δ cells) and pancreatic polypeptide (PP cells). **C** Schematic representation of the pancreatic β cell. (1) Glucose enters the cell via a glucose transporter (GLUT1 or GLUT2). (2) Glucose then enters glycolysis, and subsequent oxidative phosphorylation in the mitochondria results in a rise in intracellular adenosine triphosphate (ATP). (3) This ATP acts to close the K_{ATP} channel (which consists of four

[Launch Bookshelf >](#)

The Bookshelf gives you the ability to highlight text, create flashcards, and share content with others.

1. Search for books on the [Home](#) page or the [Browse Resources](#) page.
2. Click on the book chapter and then click the "Launch Bookshelf" button.
3. The book will immediately appear in the Bookshelf application.

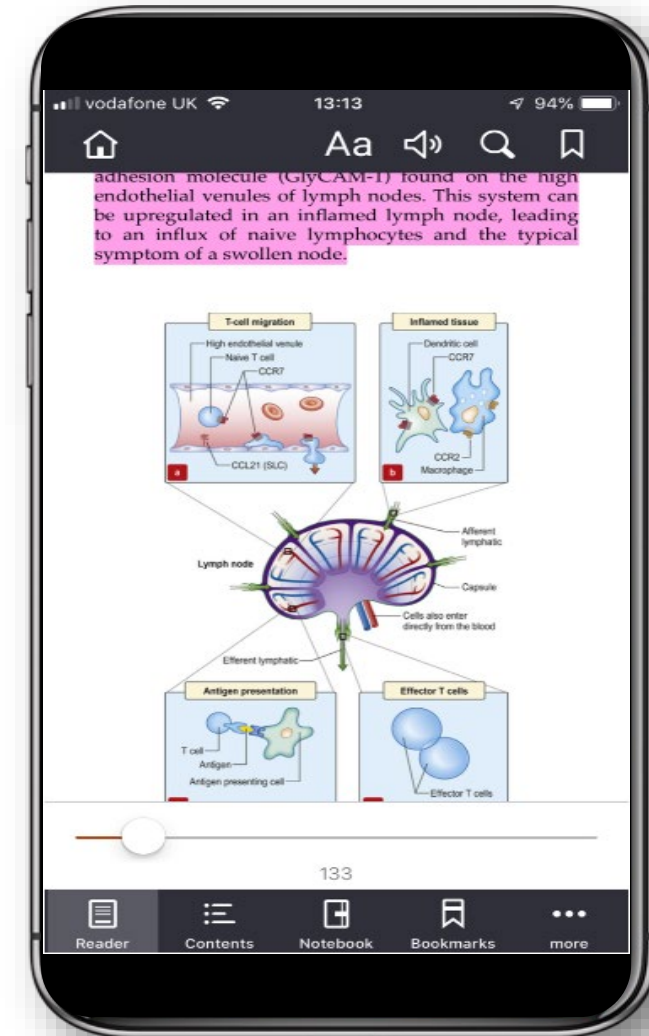

- **Personalized Bookshelf.**
- **Flashcard tool.**
- **Note-taking** (with OneNote integration) and **highlighting.**
- **Share** notes and learning with students around the globe.
- Save Faculty and student time: **Presentation maker tool.**
- Enhance lectures using **copyright cleared** images.

Mobile app
